Income Tax Treatment of Foreign Exchange Gains or Losses for Businesses

1 Aim

1.1 This e-Tax Guide provides details on the tax treatment of foreign exchange gains or losses for businesses (banks and businesses other than banks). This e-Tax Guide consolidates the two e-Tax guides issued previously on the income tax treatment of foreign exchange gains or losses.

1.2 It would be relevant to businesses which have foreign exchange gains or losses.

2 At a glance

2.1 The tax treatment of foreign exchange differences is summarised in the table as follows:

<table>
<thead>
<tr>
<th>Nature of foreign exchange differences</th>
<th>Revenue</th>
<th>Capital</th>
<th>Translation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description</td>
<td></td>

2.2 Please refer to the paragraphs below for further details.
3 Glossary

3.1 Capital foreign exchange differences

These are foreign exchange differences arising from capital transactions. The foreign exchange differences are capital in nature.

3.2 Foreign exchange differences

Foreign exchange gains or losses are collectively referred to as foreign exchange differences.

3.3 Functional currency

Functional currency is the currency of the primary economic environment in which the entity operates. Another term for functional currency is measurement currency.

3.4 Revenue foreign exchange differences

These are foreign exchange differences arising from revenue transactions. The foreign exchange differences are revenue in nature.

3.5 Translation

Translation refers to the conversion of an amount in foreign currency to a business’ functional currency.

3.6 Translation foreign exchange differences

These are foreign exchange differences arising from translating the financial statements prepared in the functional currency of the business to another currency for presentation purpose.
4 Tax treatment of foreign exchange differences

4.1 Foreign exchange differences can arise from capital or revenue transactions. Whether a transaction is capital or revenue in nature is dependent on the facts and circumstances of each case.

4.2 For income tax purposes, foreign exchange differences arising from capital transactions ("capital foreign exchange differences") are capital in nature. They are, therefore, not taxable as income or deductible as an expense (referred to as “taxable or deductible”). On the other hand, foreign exchange differences arising from revenue transactions ("revenue foreign exchange differences") are revenue in nature. They are, therefore, taxable or deductible.

4.3 It is a well established principle of taxation that gains or losses are recognised for tax purposes only when they are realised. Thus, revenue foreign exchange differences are taxable or deductible only when they are realised.

4.4 Foreign exchange differences are considered as realised when the foreign currencies are physically converted into or exchanged for the functional currencies of the businesses, or vice versa.

4.5 However, for administrative ease, the Comptroller of Income Tax ("CIT") regards revenue foreign exchange differences arising under these two situations as realised even if there is no physical conversion or exchange of the foreign currencies:

a. Sales/purchases settled in the same accounting period

The sales or purchases of the business transacted in foreign currencies (i.e. currencies other than the functional currency) are settled (i.e. payment received or made) in the same accounting period. However, the exchange rates at the time of the transactions and at the time of settlement of the transactions may be different. As a result, foreign exchange differences are charged to the profit and loss account. For administrative ease, they are regarded as realised when the transactions which give rise to them are settled. They are taxable or deductible in the same accounting year. Please refer to the example in the Annex.

b. Sales/purchases not settled in the same accounting period

The sales or purchases of the business transacted in foreign currencies are not settled in the same accounting period in which the transactions arose. However, the exchange rates at the end of the accounting period may be different from those at the transaction date or that applied at the end of the previous accounting year-end. As a result, foreign exchange differences arising from translating the monetary items (e.g. debtors and creditors) denominated in foreign currencies into the functional
currency of the business are charged to the profit and loss account. For administrative ease, they are deemed to be realised in the following year and taxable or deductible accordingly. Please refer to the example in the Annex.

4.6 Apart from foreign exchange differences arising from capital or revenue transactions, foreign exchange differences may also arise from translating the financial statements prepared in the functional currency (e.g. US$) of the business to another currency (e.g. S$) for presentation purpose ("translation foreign exchange differences"). These are merely notional gains or losses and are therefore not taxable or deductible for tax purposes.

4.7 The table below summarises the tax treatment of foreign exchange differences mentioned in the paragraphs above:

<table>
<thead>
<tr>
<th>Nature of foreign exchange differences</th>
<th>Realised or unrealised?</th>
<th>Taxable or deductible?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Capital</td>
<td>Not relevant</td>
<td>No</td>
</tr>
<tr>
<td>Revenue</td>
<td>Realised</td>
<td>Yes</td>
</tr>
<tr>
<td></td>
<td>Unrealised</td>
<td>No, unless regarded as realised by CIT in paragraphs 4.5(a) and 4.5(b) above</td>
</tr>
<tr>
<td>Translation</td>
<td>Not relevant</td>
<td>No</td>
</tr>
</tbody>
</table>

5 Accounting versus tax treatment

5.1 For accounting purposes, the profit and loss account does not separately reflect capital, revenue or translation exchange differences and whether they are realised or unrealised.

5.2 In view of the different treatment of foreign exchange differences for tax purposes, businesses need to keep track of their foreign currency transactions which are revenue in nature. This is so that they can determine if the foreign currencies have been physically converted into the functional currencies before treating the revenue foreign exchange differences as realised for income tax purposes.
5.3 The CIT recognises that the tracking of the foreign currency transactions requires additional efforts and for some businesses, the transactions involved may be voluminous. Businesses have represented that they face difficulties in distinguishing between realised and unrealised revenue foreign exchange differences. Taking into consideration the feedback from businesses on the tax treatment of foreign exchange differences, the CIT has put in place two concessionary tax treatments for revenue foreign exchange differences.

6 Administrative concession – To accept accounting treatment for revenue foreign exchange differences

6.1 The CIT accepts, for tax purposes, the accounting treatment adopted by businesses for revenue foreign exchange differences. This means that businesses will no longer need to distinguish between realised and unrealised revenue foreign exchange differences. All revenue foreign exchange differences will be taxable or deductible in the year they are charged to the profit and loss account.

6.2 Scope of the administrative concession

The concession only applies:

a. to revenue foreign exchange differences. Capital and translation foreign exchange differences remain not taxable or deductible; and

b. when the same accounting treatment is consistently applied to both revenue foreign exchange gains and revenue foreign exchange losses.

6.3 Effective dates of the administrative concession

a. Banks

The concession applies to banks with effect from 2 Nov 1993.

b. Businesses other than banks

The concession applies automatically to all businesses other than banks with effect from the Year of Assessment 2004.

If any businesses other than banks have opted out of the concession when submitting the income tax return for the Year of Assessment 2004, their decision is irrevocable2. These businesses must follow the tax treatment of foreign exchange differences.

---

2 Businesses other than banks were given the option to opt out of the administrative concession when it was introduced in 2003 (“Income Tax Treatment of Foreign Exchange Gains or Losses for Businesses” published on 28 Nov 2003).
differences as explained in paragraph 4. This means that revenue foreign exchange differences are not taxable or deductible until they are realised or regarded as realised by CIT in paragraphs 4.5(a) and 4.5(b).

6.4 In the first assessment year that the concession is effective, any prior years unrealised revenue exchange differences which were not taxable or deductible previously, would have been regarded as realised in that assessment year.

7 Administrative concession – To regard the designated bank account maintained for receiving trade receipts and paying revenue expenses as revenue in nature

7.1 Some businesses maintain foreign currency bank accounts for the purposes of their business operations. Foreign exchange differences may arise when businesses translate the year-end balances of these accounts into their functional currency. From the tax perspective, such foreign exchange differences are regarded as capital in nature and therefore, not taxable or deductible. The reasons being:

a. Generally, the funds in bank accounts constitute the capital assets of the businesses; and

b. The bank accounts hold the cash proceeds of the businesses (e.g. sales or investments) and provide the means for payment (e.g. purchases of stocks or assets). The foreign exchange differences arising from any revenue transactions would have been recognised for tax purposes when they are settled. Hence, the foreign exchange differences arising from the translation of the year-end balances of the foreign currency bank accounts into the businesses’ functional currency represent the cost of holding the foreign currencies to meet both capital and revenue requirements of the businesses.

7.2 Some businesses may, however, designate a specific foreign currency bank account ("designated bank account") solely for the purpose of receiving trade receipts\(^3\) and paying revenue expenses\(^4\) in a particular foreign currency. The designated bank account is not used for any other purposes. In such a case, the CIT is prepared to regard the designated bank account as revenue in nature. Hence, any foreign exchange differences arising from the translation of the year-end balance of the designated bank account into the businesses’ functional currency will be taxable or deductible.

---

\(^3\) Sales on revenue account, whether of goods or services, or trade debtors are collectively known as trade receipts.

\(^4\) Purchases on revenue account, whether goods or services, or trade creditors or operating expenses are collectively known as revenue expenses.
7.3 **Effective date of the administrative concession**

The concession is effective from the Year of Assessment 2004.

7.4 **Administrative procedure**

Any business who wishes to enjoy the administrative concession under paragraph 7.2 would need to:

a. inform the CIT in writing that it maintains a designated bank account as mentioned in paragraph 7.2; and

b. provide documentary evidence to substantiate its claim in paragraph 7.4(a). An example of such documentary evidence is the bank statements of the designated bank account showing frequent movements in the funds that are due to trade receipts and payments for revenue expenses.

8 **Contact information**

8.1 If you have any enquiries or need clarification on this Guide, please call 1800-3568622.
